

PRECISE GEO LOCATION

UNDERSTANDING LOCATION SIGNALS?

Mobile Location Services *Accuracy*

GPS location data is the most accurate unlike IP location. Combining in-app data and GPS, you will have the most precise location data of your customers. Test Your IP Location to find out where it says you are.

It is not accurate:

BREAKING DOWN A MOBILE GPS CO-ORDINATE

In a typical in-app mobile ad request, a publisher has the ability to pass through latitude and longitude information.

We use lat/long data that has at least 6 digits after the decimal point.

MAPMYAUDIENCE has the most precise geo location targeting with accuracy of within 10cm. This enables us to map your target audiences precisely and target them wherever they may be.

MAPPING THE WORLD WITH **ACCURATE** LOCATION DATA

Defining places using accurate location signals and technology

POLYGON MAPPING TECHNOLOGY

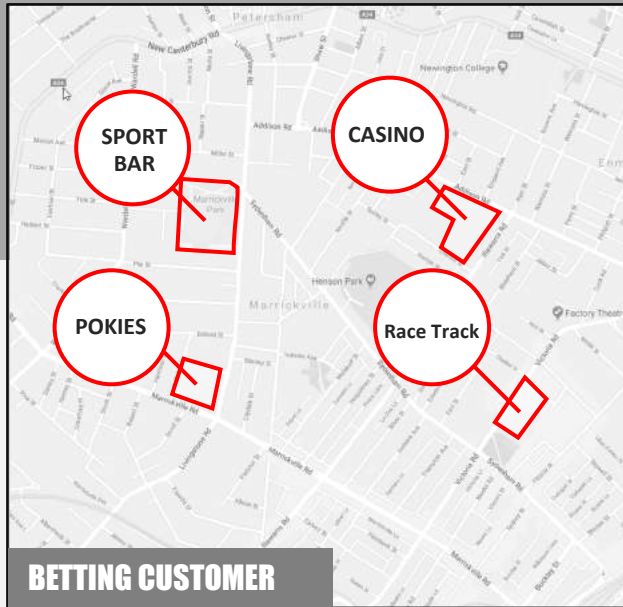

DEFINING LOCATION BOUNDARIES

Our polygon tool allows us to draw precise boundaries of competitor stores and find out who had visited those stores in the last few days or years.

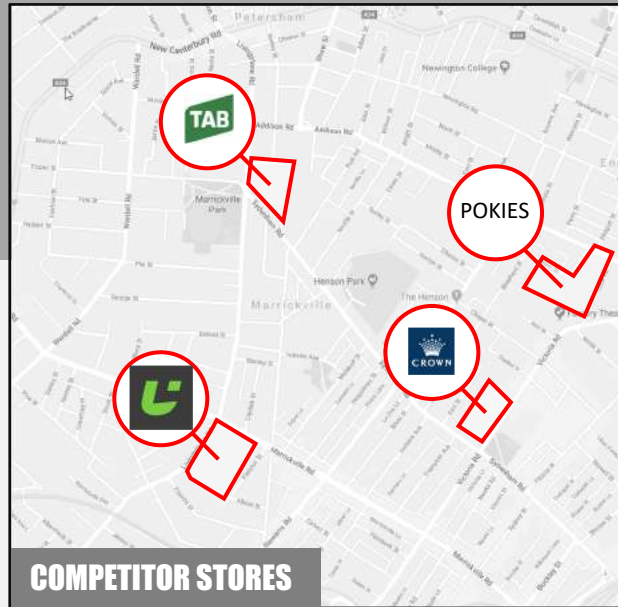

Exact boundaries of stores, points of interest, venues and events can be drawn within a simple platform. These polygons are used to define audiences and measure visitation.

HOW IS LOCATION TECHNOLOGY USED?

BEHAVIORAL AUDIENCES

The physical behaviours of a user defines what sort of person they are. Accurate audiences can be created based on users who frequently visit specific locations.

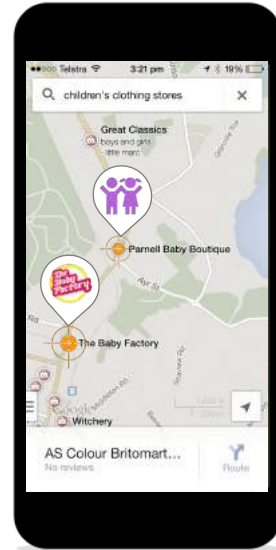

HISTORICAL AUDIENCE

Drive awareness, consideration and store visits by targeting users who have previously visited your stores or your competitor stores.

REAL TIME PROXIMITY

Proximity targeting particular locations enables you to reach users in real time to drive impulse purchases and to drive higher awareness to local customers.

1. GEO- LOCATION

Live & historical
Location data of
individuals at
listed addresses
related to
parenting

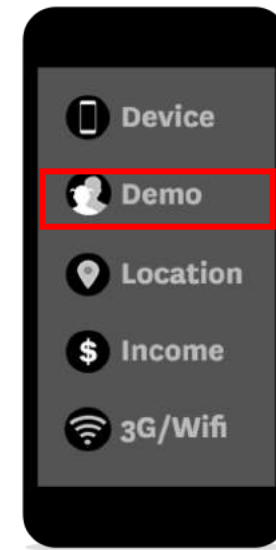

2. CONTENT
